Portfolio Website

SUMMARY

Enthusiastic Software Engineer eager to leverage foundational programming skills and collaborative mindset in contributing to impactful projects. Adaptable and quick learner with a passion for technology and a drive to deliver exceptional results.

COURSE WORK PROJECTS

Food delivery website

- Add, remove and filter food by admin category. Additionally, you have the option to review all orders.
- The new technologies used were Cloudinary and Material UI.

Income and Expense Tracker website

- Users have the ability to register and manage their income and expenses.
- Utilizing PostgreSQL, backend operations have been implemented, including Login and Signup functionalities.

Ecommerce (team project)

- The primary focus of the Admin role involved tasks such as product addition, deletion, updating, and category filtering.
- Conducted independent research on AWS S3 and successfully addressed tasks including the integration and storage of product images.

Leaving-service (Internship team project)

- We built a leaving-service system for users to submit requests, which HR can review and approve or decline.
- I upgraded the leaving-service system for HR to easily handle leaving requests, including viewing, approving, and declining them, with added date filters for usability.
